

RAINWATER HARVESTING SYSTEMS

For many uses we do not need high quality drinking water. For flushing toilets, washing machines, cleaning and garden watering you can safely use filtered rainwater, with the help of the right rainwater equipment, properly installed.

The benefits of using rainwater:

- **More efficient washing, saving up to 50% on washing powder.**
- **Washing machines do not become furred up with lime.**
- **There is no better water for your plant & garden irrigation.**
- **A major contribution to Sustainable Drainage Systems.**
- **Helps to alleviate flooding and runoff problems.**
- **Reduces pressure on the water environment.**
- **Reduces burden on stretched water supply and sewerage systems.**
- **Saves us all the energy consumed in the production of treated water.**
- **Saves you money on your metered water bill.**

Rainwater equipment:

**We offer a variety of kits that include tank inlet filtration, calmed inlet inside the tank, stainless steel submersible pump , pressure set, control panel with programmable module and mains water inlet on low level
We can also supply filtration equipment if required.**
